I. Introduction

Truist Financial Corporation (Truist or the Company) is a financial holding company (FHC) and conducts its business operations through its bank subsidiary, Truist Bank, and other non-bank subsidiaries. Truist is a purpose-driven financial services company committed to inspiring and building better lives and communities. Headquartered in Charlotte, North Carolina, Truist has leading market share in many of the high-growth markets in the U.S. and offers a wide range of products and services through wholesale and consumer businesses, including consumer and small business banking, commercial and corporate banking, investment banking and capital markets, wealth management, payments, and specialized lending businesses.

Truist Bank, the largest subsidiary of Truist Financial Corporation, is a state non-member bank and is supervised by the Federal Deposit Insurance Corporation (FDIC) and North Carolina Office of the Commissioner of Banks, while Truist Financial Corporation is supervised by the Federal Reserve Board (FRB). Truist's non-bank subsidiaries are regulated and supervised by various other regulatory bodies, including the Securities and Exchange Commission and the Financial Industry Regulatory Authority. Truist Bank was chartered in 1872 and is the oldest bank headquartered in North Carolina. Truist Bank is one of the 10 largest commercial banks in the U.S. and provides banking and trust services for clients through its digital platform and 1,927 branches as of June 30, 2026.

In October 2019, the federal banking agencies adopted final rules for Applicability Thresholds for Regulatory Capital and Liquidity Requirements (Tailoring Rule). Under the Tailoring Rule, Truist is subject to the standards applicable to a Category III banking organizations, which generally include Bank Holding Companies with greater than $250 billion, but less than $700 billion, in total consolidated assets and less than $75 billion in certain other risk-related exposures. As a Category III institution, Truist and Truist Bank are subject to a Reduced daily Liquidity Coverage Ratio (LCR) and Net Stable Funding Ratio (NSFR).

II. Net Stable Funding Ratio (NSFR)

The U.S. Net Stable Funding Ratio: Liquidity Risk Measurement Standards and Disclosure Requirements (the "NSFR rule") implements a stable funding requirement, known as the net stable funding ratio (NSFR), for certain large banking organizations. The NSFR is a quantitative metric that measures the stability of Truist's funding profile and requires that Truist and Truist Bank maintain minimum amounts of stable liabilities and regulatory capital to support its assets, commitments, and derivative exposures over a one-year time horizon.

The NSFR is expressed as the ratio of available stable funding (ASF) relative to projected minimum funding needs or required stable funding (RSF). Covered companies are required to maintain a minimum NSFR of 100%, summarized as follows:

$$\frac{\text{Total Available Stable Funding (ASF)}}{\text{Total Required Stable Funding (RSF)}} \geq 100\%$$

The NSFR rule considers the differing risk characteristics of a covered company's various assets, liabilities, and certain off-balance sheet commitments and applies different weightings (ASF and RSF factors) to reflect these risk characteristics. ASF and RSF factors are used to determine the numerator and denominator of the NSFR and reflect, respectively, the stability of funding, and the need for assets and commitments to be supported by such funding.

The NSFR serves as a complement to the Liquidity Coverage Ratio (LCR), which promotes shorter-term resilience that requires sufficient liquidity to withstand a 30 calendar-day period of significant stress. Please see Truist's Liquidity Coverage Ratio (LCR) Disclosures found on its website at https://ir.truist.com/other-filings.

Truist prepares its NSFR disclosure based on its consolidated balance sheet. The NSFR Rules for consolidation require Truist to exclude from consolidated ASF any ASF held at the subsidiary level that exceeds the subsidiary's RSF. The rules allow Truist to include any such excess ASF to the degree that the subsidiary can transfer assets to Truist Financial Corporation, considering statutory, regulatory, contractual, or supervisory restrictions. When determining Truist Bank's excess ASF amount under NSFR Rules of consolidation, Truist excludes amounts resulting from transactions between Truist and Truist Bank that are netted under GAAP when preparing the consolidated balance sheet. This results in the exclusion of Truist Bank capital from the calculation of excess ASF when calculating Truist's consolidated NSFR. As such the Total ASF does not equal the sum of its quantitative disclosure components (see section III).

The following table summarizes Truist's average NSFR for the three months ended March 31, 2026 and three months ended June 30, 2026, respectively.

Three months ended March 31, 2026 (dollars in millions)		**Average weighted amount [1]**
Truist Financial Corporation:		
Total ASF [2]	$	351,786
Total adjusted RSF		277,887
NSFR		**127 %**

[1] Represent the average weighted amount after applying NSFR rule prescribed ASF and RSF rates, respectively.
[2] Excludes average excess ASF at Truist Bank that cannot be transferred.

Three months ended June 30, 2026 (dollars in millions)		**Average weighted amount [1]**
Truist Financial Corporation:		
Total ASF [2]	$	358,803
Total adjusted RSF		284,573
NSFR		**126 %**

[1] Represent the average weighted amount after applying NSFR rule prescribed ASF and RSF rates, respectively.
[2] Excludes average excess ASF at Truist Bank that cannot be transferred.

Truist's average NSFR is driven by the stability of funding sources coupled with the liquidity characteristics and residual maturities of assets and the contingent liquidity risk from off-balance sheet exposures. For the quarterly periods ended Dec 31, 2025, March 31, 2026 and June 30, 2026, Truist's average reduced NSFR was 127%, 127%, and 126% respectively, and in compliance with the regulatory minimum for such entities of 100%.

Truist's NSFR for the 1st quarter of 2026 was the same as the 4th quarter of 2025, with higher total average weighted ASF offset by higher total average weighted RSF.

Truist's NSFR for the 2nd quarter of 2026 was lower than the 1st quarter of 2026 due to higher total average weighted RSF.

III. U.S. NSFR Quantitative Disclosure

The following disclosures present expanded detail on Truist's average NSFR, and average unweighted and weighted amount of ASF items, and RSF items for the three months ended March 31, 2026 and three months ended June 30, 2026, respectively.

IV. Concentrations of Funding Sources and Changes in Funding Structure

Sources of Funds

Truist's balance sheet is composed of diversified funding sources including deposits, capital markets secured and unsecured funding, and shareholders' equity. Deposits are the primary source of funds for Truist Bank's lending and investing activities. Additionally, Truist Bank may access funding through short- or long-term secured borrowings, through the issuance of unsecured long-term debt, or from inter-company borrowings from the Parent Company. Truist's non-bank subsidiaries are primarily funded through internal funding arrangements or, in the case of Truist Securities, through short-term secured borrowings which are securities sold under repurchase agreements. Truist Bank represents over 98% of Truist total liabilities and equity capital.

Capital markets wholesale funding is managed within liquidity policy tolerances, balance-sheet objectives, interest-rate risk considerations, and Truist's risk appetite framework. Truist management monitors capital markets wholesale funding to ensure appropriate maturity and funding source diversification.

Deposits

Truist has a granular and diversified deposit base comprised largely of core retail and commercial clients. Truist's deposits are a stable and primary source of funding and limit the Company's need for wholesale capital markets funding. Within the NSFR Rule, retail funding is grouped into the following primary categories: 1) stable deposits, 2) less stable deposits, and 3) sweep deposits, brokered reciprocal deposits, and brokered deposits. Wholesale funding is grouped into the primary categories of operational deposits, and other wholesale funding.

Funding Structure

Truist's stable funding mix contributes to the stability of the NSFR. The tables below summarize NSFR weighted funding source concentrations for the three months ended March 31, 2026 and June 30, 2026, respectively.

Funding Concentrations **Three months ended March 31, 2026** **(dollar in millions)**	**Average unweighted ASF amount**	**Average weighted ASF amount [1]**	**Average weighted ASF Rate [2]**
Capital and Securities	**$ 109,479**	**$ 101,564**	**93%**
Regulatory capital elements	72,799	72,799	100%
Other capital elements and securities	36,680	28,765	78%
Retail Funding	**$ 241,552**	**$ 214,646**	**89%**
Stable deposits	149,268	141,804	95%
Less stable deposits	68,487	61,639	90%
Sweep deposits, brokered reciprocal deposits, and brokered deposits	23,610	11,110	47%
Other retail funding	187	93	50%
Wholesale Funding	**$ 181,933**	**$ 88,834**	**49%**
Operational deposits	85,833	42,916	50%
Other wholesale funding	96,100	45,918	48%
Total	**$ 532,964**	**$ 405,044**	**76%**

(1) Represent the average weighted amount after applying NSFR rule prescribed ASF rates. Totals do not deduct Truist Bank Excess ASF.
(2) The higher the ASF rate, the higher degree of funding stability.
