Overview

UBS Americas Holding LLC (UBS AH, together with its consolidated subsidiaries, the Company) and its subsidiary, UBS Bank USA (BUSA), are each required to maintain a minimum Net Stable Funding Ratio (NSFR) of available stable funding (ASF) to required stable funding (RSF), over a one-year time horizon, as provided in the U.S. NSFR rule. The Company became subject to this requirement effective as of July 1, 2021. Also, the Company is required to provide semi-annual public disclosures which include the two quarters within that semi-annual period. The disclosure includes quantitative and qualitative information related to its NSFR calculations and liquidity management practices.

UBS AH is the Intermediate Holding Company for UBS Group AG's U.S. subsidiaries pursuant to Regulation YY of the Board of Governors of the Federal Reserve System. UBS AH's principal operating subsidiaries include BUSA, UBS Financial Services Inc. (FSI), and UBS Securities LLC (SEC LLC). BUSA is a U.S. Insured Depository Institution regulated by the Federal Deposit Insurance Corporation as well as regulators in the state of Utah. FSI and SEC LLC are subject to regulation by several different government agencies and self-regulatory organizations.

The Company's business includes wealth management, investment banking and asset management. Wealth management provides comprehensive advice and tailored financial services including investment management, wealth planning, banking, and lending, and corporate financial advice to high-net-worth individuals and families. The investment bank provides corporate, institutional and wealth management clients with expert advice, innovative financial solutions, and access to the world's capital markets. Asset management is a full-service asset manager providing investment and sub-advisory services to individuals and institutions in the U.S.

U.S. Net Stable Funding Ratio

The NSFR is a quantitative liquidity requirement intended to measure the stability of the banking organization's funding profile and requires the maintenance of minimum amounts of stable funding to support assets, derivative exposures, and commitments over a one-year time horizon. The Basel Committee on Banking Supervision (BCBS) published the international liquidity standards in 2010 as part of its Basel III regulatory capital rules which was finalized in 2014. In 2021, the U.S. banking regulators adopted a final rule to implement this quantitative liquidity requirement generally consistent with the BCBS NSFR for large U.S. banking organizations, U.S. intermediate holding companies (IHCs) of foreign banking organizations, and their depository institution subsidiaries that meet the applicability criteria of the NSFR rule. In 2019, the U.S. banking regulators issued guidance that provided for tailored application of certain capital, liquidity, and stress testing requirements across different categories of banking organizations, including IHCs of foreign banking organizations, known as the Tailoring Rule. U.S. banking organizations subject to the NSFR minimum requirements are herein referred to as "Covered Companies".

The NSFR rule is a balance sheet-driven funding metric that requires Covered Companies to maintain on a daily basis an amount of ASF (liabilities and capital) sufficient to support its RSF (assets, derivative exposures, and commitments) over a one-year time horizon as calculated in accordance with the U.S. NSFR rule. The NSFR is calculated by dividing ASF by RSF, with a minimum ratio requirement of 100%. Under the Tailoring Rule, as a Category III institution with total weighted short-term wholesale funding of less than $75.0bn, the Company is eligible for a reduced NSFR requirement whereby the Company's RSF is reported as 85% of its full RSF.

The Covered Company's ASF is calculated as the sum of the carrying values of the Covered Company's liabilities and regulatory capital, each multiplied by a standardized weighting factor which reflects the relative stability of the Covered Company's liabilities and regulatory capital over a one-year time horizon. The ASF weighting factor is determined based on funding tenor, funding type, and counterparty type.

RSF represents the sum of the carrying values of the Covered Company's assets each multiplied by a standardized weighting factor and RSF amounts attributable to its commitments and derivative exposures. The RSF weighting factors are determined based on the liquidity characteristics of the assets and takes into consideration the asset's funding tenor, encumbrance, counterparty type, credit quality and market characteristics.

NSFR Qualitative Disclosures

Main Drivers of NSFR

The table below summarizes the Company's average NSFR for the quarters ended March 31, 2026, and June 30, 2026.

(USD m)	March 31, 2026	June 30, 2026
Available stable funding[1]	102,609	105,094
Required stable funding (adjusted to 85%)	81,173	80,923
Net Stable Funding Ratio	126.4%	129.9%

[1] *Excludes ASF amounts that are available to meet funding, collateral, and regulatory requirements of certain subsidiaries of UBS AH but are not readily transferable to UBS AH or any of its other subsidiaries (Excess ASF).*

The Company maintained a daily NSFR well above the regulatory minimum of 100% throughout both quarters.

NSFR as of June 30, 2026, was 129.9% which increased from 126.4% as of March 31, 2026. The increase was primarily driven by a 2.5bn increase in adjusted available stable funding as there was an increase in long-term borrowing with AG and a decrease in trapped subsidiary funding.

Main drivers of ASF

The Company maintains a funding profile that is diversified across a range of funding types and tenors. The Company closely manages its short-term and long-term liquidity needs and risks in the normal course of business and under different stress scenarios.

Potential liquidity risks associated with the Company's sources of funding are monitored and mitigated in accordance with the Combined U.S. Operations (CUSO) Liquidity and Funding Risk framework.

The primary sources of funding for the Company for the quarters ended March 31, 2026, and June 30, 2026, are below.

	March 31, 2026		June 30, 2026	
(USD m)	Average Unweighted Amount	Average Weighted Amount	Average Unweighted Amount	Average Weighted Amount
Total ASF[2]	211,595	102,169	214,496	105,094
o/w Regulatory capital	*25,798*	*25,798*	*25,844*	*25,844*
o/w Long-term borrowings	*19,926*	*19,926*	*22,291*	*22,291*
o/w Retail deposits	*88,411*	*59,550*	*87,772*	*57,844*

[2] *Average weighted amounts are inclusive of any Excess ASF retained at the Company's subsidiary level but not included in the Company's consolidated NSFR results.*

Regulatory capital – The Company's capital elements include its common equity tier 1 capital, additional tier 1 capital, and tier 2 capital, as those terms are defined in the US banking regulators' risk-based capital rules.

Long-term borrowings - The Company's parent, UBS AG, provides the Company with unsecured long-term borrowings to support the cash needs of the Company's businesses and funds its liquidity buffer.

Retail deposits - The Company has a deposit base largely made up of retail customers which represent a main source of funding for the Company. These deposits provide a sizeable source of relatively stable and low-cost funding.

Main drivers of RSF

The primary driver of the Company's funding needs is unsecured and secured loans and advances made to banks and customers as shown below. For the quarters ended March 31, 2026, and June 30, 2026, the average weighted amounts of loans and advances to banks and customers represented **65% and 66%,** respectively, of total average weighted RSF.

(USD m)	**March 31, 2026**		**June 30, 2026**	
	Average Unweighted Amount	Average Weighted Amount	Average Unweighted Amount	Average Weighted Amount
Loans to financial sector entities				
o/w secured by Level 1 assets	15,209	67	14,597	66
o/w unsecured or secured by non-Level 1 assets	40,145	11,761	39,520	11,154
Loans to other wholesale counterparties or retail counterparties	53,989	29,640	56,189	30,529
Retail mortgages	31,442	20,244	31,960	20,576
Total loans and advances to banks and customers	**140,784**	**61,712**	**142,267**	**62,325**

In addition, the Company's non-financial assets (e.g., goodwill, deferred tax assets and fixed assets) contributed **24% of the average weighted RSF, for both quarters ended March 31, 2026, and June 30, 2026, respectively.**

Derivative Exposures

The Company enters into derivative transactions in order to reduce its own exposure to market and interest rate risk and in connection with its trading activities. The Company's NSFR reflects a component to account for potential future derivatives valuation changes.

Liquidity Risk Management

The Company maintains a liquidity risk management framework intended to maintain a sound liquidity position and sufficient financial flexibility to respond to a liquidity stress event that is set within the parameters of the overall liquidity and funding framework established for UBS Group AG and its subsidiaries. The liquidity and funding framework for the Company is proposed by management and approved by the CUSO Asset and Liability Management Committee and the UBS AH's Board of Directors. The CUSO Liquidity and Funding Risk framework takes precedence in the event of any differences with the UBS Group AG framework.

The Company manages liquidity primarily through daily and monthly internal liquidity reporting and monitoring by Regional Treasury Americas function. The Company maintains a Treasury risk function that operates as a second line of defense to monitor liquidity and funding risk, with support from Market Risk Control, Market Risk Management and Compliance and Operational Risk Control functions. Group Internal Audit assesses the adequacy and operating effectiveness of controls over the end-to-end liquidity and funding risk management and governance processes.

NSFR Quantitative Disclosures

The following table presents the Company's NSFR and average unweighted and weighted amounts of ASF and RSF for the quarters ended June 30, 2026, and March 31, 2026.

	Quarter ended 06/30/2026 **In millions of U.S. dollars**	**Average Unweighted Amount**					**Average Weighted Amount**

Forward-Looking Information

The NSFR rule sets forth minimum liquidity standards designed to ensure that Covered Companies maintain a stable funding profile to support assets, derivative exposures, and commitments over a one-year time horizon. Accordingly, the NSFR rule prescribes assumptions with respect to the liquidity of certain assets and the stability of liabilities. This document may contain forward-looking information based on these assumptions. These assumptions are not intended to be a forecast by the Company, but rather reflect possible outcomes based on the requirements of the NSFR rule. While this forward-looking information represents the Company's judgements and expectations concerning the matters described above, a number of risks, uncertainties and other important factors can cause actual developments and results to differ materially.
